

IF IT GROWS, IT GROWS BETTER WITH FISH SHIT!

SOY/CORN

FISH SHIT

- is the most robust biology available on the market; beneficial microbes promote nutrient mineralization and availability, acting as a biocontrol agent to fight off plant pests, parasites, and diseases
- has over 4,000 distinct and specific species of microbes in every dose - more than any other biology on the market
- has billions of microbes in every dose
- is 100% organic, 95% carbon-based renewable product, crafted utilizing Fish Head Farms closed loop aquaculture system

CORN AVERAGE bu/A INCREASE = 12
SOY AVERAGE bu/A INCREASE = 11

*Based on multiple third-party independent field trials with control and test plots

TESTING OF FISH SHIT ROW CROPS HAS SHOWN:

- To be extremely effective applied in-furrow during planting
- To work effectively with either organic or conventional inputs
- To dramatically improve soil health
- To build longer and stronger roots, resulting in better nutrient uptake, more efficient water utilization, and drought resistance
- To improve nutrient availability and plant health, helping to prevent diseases and fight off bacterial infections
- To increase yields and product quality
